

Model Portfolio Service

Cazenove Capital MPS Equity Risk
Q2 2017

For professional advisers only.
This must not be distributed to retail clients.

Investment objective and strategy

For clients who wish to maximise investment returns and can tolerate risk similar to, and possibly greater than, global equities. The portfolio uses a broad range of assets on both a long-term and an opportunistic basis in order to pursue its objective, and may have exposure to non-base currencies. Holdings in fixed income, cash and other defensive assets are likely to be minimal. The portfolio will be volatile and there might be significant risk of capital loss as capital markets fluctuate in order to achieve the longer term objective. The aim of the portfolio is that, in the longer term, the value of the assets should grow significantly in excess of inflation.

Strategy characteristics

- Portfolio comprised of passive strategies and 'best of breed' active fund managers
- Focus on long-term capital growth.

Technical information

Platform launch date	Model portfolio fee	Available as	Portfolio information
4 th July 2016	0.30% + VAT	<ul style="list-style-type: none"> - General Investment Accounts - ISAs - SIPP 	Estimated annual yield: 1.85%*

* Estimated annual yield is not guaranteed and is for illustrative purposes only.

Performance (%)**

	Monthly performance									Cumulative
	Oct-16	Nov-16	Dec-16	Jan-17	Feb-17	Mar-17	Apr-17	May-17	June-17	Since inception
Cazenove Capital MPS Equity Risk	+3.3	-1.1	+3.2	+0.8	+2.6	+0.7	-0.5	+2.9	-1.2	+20.1

** Performance is shown on a total return basis, net of underlying fund charges but gross of Cazenove Capital fees and any fees applied by the platform and professional adviser, deduction of these will have an impact on overall performance. Inception date 30th June 2016. Performance is calculated by Cazenove Capital and provided for illustrative purposes only and should not be viewed as the performance of a specific client portfolio.

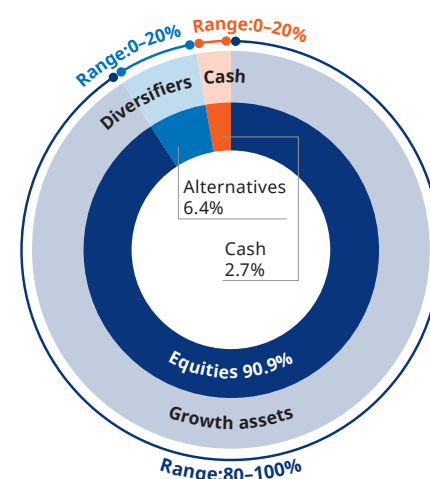

Past performance is not a guide to future performance. The value of investments and the income received from them can fall as well as rise. Investors may not get back the amount invested.

Current asset allocation

Economic overview

Following the strong equity rises of the previous 12 months, it is perhaps not surprising that these markets should start to show signs of fatigue. Returns in the second quarter were muted with the MSCI World Index returning just 0.3% although the return for the first half of the year as a whole was a still healthy 5.6%. The equivalent returns for the UK equity market as measured by the FTSE All-Share Index were 1.4% and 5.5% respectively.

Politics continued to dominate the news channels with President Trump providing a continuous stream of talking points, many

emanating from his Twitter feed. In the UK, Theresa May's electoral opportunism backfired from her perspective although markets once again managed to shrug off this potential banana skin with one school of thought suggesting that the Conservative Party's weakened position was more likely to lead to a softer 'Brexit'.

Markets have also been supported by 'synchronised' economic growth across the developed economies although this has led to debate about the pressure that central banks are increasingly under to reduce their extra-ordinary, post-

financial crisis stimulus measures. With inflationary pressures remaining relatively subdued, it is unlikely that interest rates will rise materially in the near future but with rate rises already underway in the US, tightening cycles are potentially also coming in the UK and eventually even Europe, and have the potential to spook equity and bond markets if handled clumsily. As such, central bankers have been trying out various forms of verbal 'guidance' to prepare markets without causing panic.

Portfolio overview

The models made steady progress during the quarter, with equities once again helping drive returns coupled with our alternatives exposure. Government bonds in general saw poor returns following speculation around rising interest rates, with our preference for short-dated corporates (investment-grade and high-yield) helping post-positive returns in this area. TR Property was up strongly with useful returns also seen from 3i

Infrastructure. Gold was the largest detractor, although much of this was to do with the translation effect from US dollars to sterling.

Within equities, it was Europe (Jupiter European Special Situations), Asia (Schroder Asian Alpha Plus) and Emerging Markets (Fidelity Emerging Markets) that led the way. At the start of the quarter we added to European equities (reducing UK

ahead of the French election, believing that Marine Le Pen would make the 2nd round run-off but ultimately fall short in her bid for presidency, whilst also seeing better that expected economic growth in the continent.

Looking ahead, valuations on high-yield bonds are starting to appear stretched so our intention is to take profits and re-invest into short-dated investment-grade bonds.
