

Active/Passive Cautious

Model Portfolio Service
October 2020

Marketing material for professional investors and advisers only

Investment objective and strategy

For clients who wish to preserve capital and to outperform cash and short-term government bonds while only subject to a limited amount of equity-type risk. The portfolio uses a blend of active and passive assets with active management on both a long-term and an opportunistic basis in order to pursue its objectives, including an allocation to equity or equity-like investments and non-base currencies in pursuing its aims. Cash, fixed income and other lower volatility investments are likely to form a significant part of the portfolio. The risk of capital loss may be limited in the longer term but there is a risk that the real value of the portfolio will be eroded over time by inflation.

Economic overview

It now looks increasingly likely that Europe is facing a “second wave” of coronavirus. The UK and other European countries are reporting the highest case numbers since spring and governments have re-introduced restrictions to limit the spread. The increase in cases has likely contributed to the rise in stock market volatility in recent weeks. The lack of progress on further fiscal stimulus in the US may also be a concern for investors. If Congress fails to agree on another support package, US consumer spending may not be sustained at current levels.

In the UK, the Chancellor of the Exchequer took the unusual step of cancelling a Budget as the government focuses on supporting the economy. One immediate challenge will be the end of the furlough scheme later this month. A new job support plan will help cushion the blow – but it is less generous than the furlough scheme and unlikely to prevent a rise in unemployment.

Portfolio overview

Most major equity markets sold off in September as the coronavirus dominated headlines. Japan bucked the trend, with our position in the Vanguard Japan Index fund up strongly, as Yoshihide Suga was confirmed as the new prime minister taking over from Shinzo Abe. Sterling weakened by 3.5% against the US dollar, with our bias to overseas equities helping protect against the market falls. During this risk off period our government bond positions produced positive returns, albeit these were offset by our alternatives.

What are the risks?

Prior to making an investment decision, please consider the following risks:

- (i) Interest rate risk:** For models investing in fixed income, changes in interest rates are likely to affect the asset's value. In general, as interest rates rise, the price of a fixed bond will fall and vice versa.
- (ii) Credit risk:** The value of the model may fall if the companies and governments who have issued the bonds deteriorate in quality, or in the worst case scenario become insolvent.
- (iii) Liquidity risk:** It may be difficult to sell some investments (or sell them without making a loss) due to an insufficient number of buyers in the market.
- (iv) Currency risk:** The model can hold some investments that are not denominated in UK Pound Sterling (£). These may be affected by changes in currency exchange rates.
- (v) Emerging market risk:** The model invests in markets where economic, political and regulatory factors can be significant. This may affect the liquidity, settlement and asset values. Any such event can have a negative effect on the value of your investment. Investments in emerging markets can demonstrate significant declines in value over extended periods of time.

Important Information

Past performance is not a guide to future performance. The value of an investment and the income from it may go down as well as up and investors may not get back the amount originally invested.
